# 3D Printing Creative Design Workshop

A collaboration between the Jewellery Industry Innovation Centre at Birmingham City University and the Lancaster Product Development Unit (LPDU) at Lancaster University.

## Access to expertise

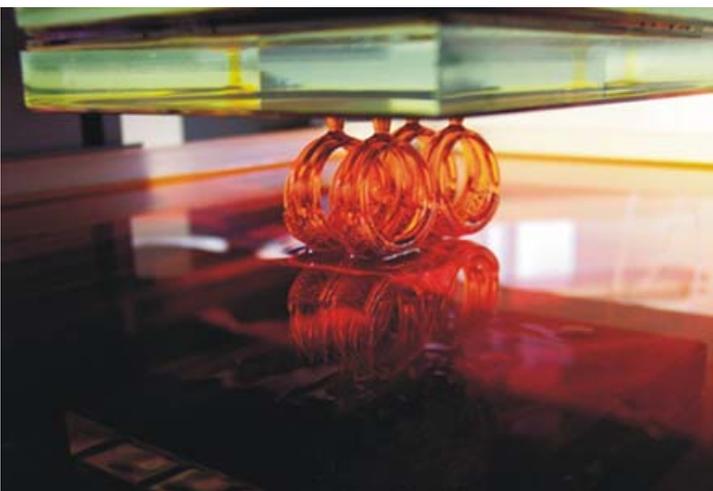

The Jewellery Industry Innovation Centre (JIIC), is internationally respected for its pioneering practices in the areas of innovative metal manufacturing, application of advanced techniques and expertise in utilising highly complex 3D CAD/CAM and laser technologies.

LPDU is a knowledge exchange team based in the Engineering Department at Lancaster University. It undertakes applied research and provides a wide range of business support services to SMEs across the North West of England, specialising in engineering design and additive manufacturing.

## The workshop

During this one day, fully-funded workshop you will be able to familiarise yourself with Computer Aided Design (CAD) software and industry specific modelling techniques to generate 3D representations of designs. Tutors will be on hand to explain the process and its benefits to your business. You may also bring a model or idea along for a troubleshooting discussion.

The workshop will be held at the Manchester Craft & Design Centre, 17 Oak Street, Northern Quarter, Manchester, M4 5JD between 10:00 am - 3.30 pm on Wednesday 3rd December 2014.
